CYBERLENCE

CYBERLENCE IN ACTION

Continuous Business Impact Analysis

Business Impact Analysis isn't obsolete — it's more important than ever. Treated as a snapshot in time, though, it's stale before it's read. By 2028, a third of enterprise applications will include agentic AI[1], pulling in agents, APIs and third-party services that shift daily, and attacks now move at machine speed — an attacker compromises one identity and impact propagates in minutes. A BIA refreshed yearly can't answer what's affected right now.

A LIVING VIEW, NOT A SNAPSHOT

Know the Impact Right Now — Not Last Quarter's Snapshot

For years, BIA asked what happens if this application goes down. Cyberlence asks what's the impact right now, and how it changes as the threat moves through your dependencies — because BIA should change as continuously as the applications it protects.

CYBERLENCE SOLUTION

Four Signals. One Continuous View.

Business Context defines what keeps the lights on. Application Structure maps how services are built today. Incident Intelligence tracks how a threat is propagating right now. Recovery Readiness confirms whether your defenses can adapt — turning a static document into a living model of risk.

ALWAYS CURRENT, NEVER STALE

Every new agent, integration, or data source updates your application structure automatically — so your BIA reflects what's running today.

IMPACT THAT MOVES WITH THE THREAT

As an incident propagates through your dependencies, Cyberlence recalculates business impact in real time — what's at risk right now.

CUSTOMER BENEFIT

What Your Team Gets

One Continuous Thread: Business context, application structure, incident intelligence and recovery readiness connect automatically — not four exercises run on different schedules.

Prioritize What Actually Matters: Stop chasing low-risk technical alerts and focus remediation on what threatens real, mapped business services.

A BIA That Answers in Real Time: Know what's affected right now and how far it can spread — not just what was true at the last review.

Is your BIA a current view of your business — or a historical snapshot?
